Fixed daily data snapshot
165 entries; 133 unique tickers
Supervised: 60-day multivariate windows
Own usable-data splits; boundary purge
Fit on training; select on validation
Evaluate all eligible test origins
Chronos: univariate context up to 512
No asset-specific fitting
Up to 96 test origins per condition
Small full-origin sensitivity subset
For each model: persistence on the same origins and target dates
Recompute errors and strict RMSE ratio < 1
Report descriptive results separately by protocol
